1. What Is This App?

The **AoE2 Tournament Agent v5** is a single web application that manages Age of Empires II: Definitive Edition tournaments for **multiple Discord servers simultaneously**. You run one app; each Discord community gets their own isolated tournament with a unique URL.

Key features:

- 1 One platform, unlimited tournaments** — create a separate tournament for every Discord server that hires you
- 2 Custom URL per server** — e.g. `yourapp.com/##t/NA-KINGS` for one server, `/##t/EU-WARLORDS` for another
- 3 Complete isolation** — each tournament has its own players, brackets, settings, fees, and admin password
- 4 Auto-scheduled placements** — when registration closes, the agent generates all 5-game placement schedules automatically
- 5 Flexible time windows** — admin sets allowed play times (e.g. Sat 14:00-22:00 UTC); matches spread within those windows
- 6 Player self-service** — register, log in, see placement schedule, report results — all without contacting the organiser
- 7 Split fee model** — player entry = your admin fee + server's prize fee; both tracked separately
- 8 Platform admin dashboard** — see all tournaments, total admin fees collected, disputes across all servers

2. What's New in Version 5

Feature	Description
Multi-Server Architecture	One app hosts unlimited tournaments. Each gets its own URL, admin password, player roster, and complete data isolation.
Platform Admin Dashboard	Super-admin view shows all tournaments, total revenue, disputes, and player counts. Accessible at <code>/#/admin</code> .
Custom Tournament URLs	Each tournament gets a shareable URL: <code>yoursite.com/#!/t/CODE</code> . Players bookmark it; it's their tournament home.
Split Fee Model	Entry fee = admin fee (yours) + prize fee (server host's). Both tracked separately with payment confirmation per player.
Flexible Time Windows	Admin sets specific day+hour windows in UTC. Placement matches auto-schedule within those windows only. No timezone bias.
Auto-Placement Scheduling	When registration closes, agent generates all placement match pairings and time slots automatically. Zero manual scheduling.
URL-Based Routing	Landing page shows all active tournaments. <code>/#/admin</code> is the platform dashboard. <code>/#!/t/CODE</code> is each tournament.
Per-Tournament Admin	Each tournament has its own admin password. Server hosts can manage their own tournament independently.

3. The Business Model (How You Make Money)

Every player who enters a tournament pays two fees:

Fee	Who Gets It	Amount	Purpose
Admin Fee	You (platform owner)	You set it (e.g. \$5)	Payment for running the tournament platform
Prize Fee	Discord server host	Host sets it (e.g. \$10)	Goes into prize pool for winners

Example: A Discord server with 80 players, \$5 admin fee + \$10 prize fee:

Item	Amount
80 players × \$5 admin fee	\$400 → YOU
80 players × \$10 prize fee	\$800 → Server host (prize pool)
Total collected	\$1,200

Placement games are always free — players can complete their ELO classification before paying. The entry fee gates tournament bracket access only.

Revenue potential: 10 Discord servers × 80 players × \$5 admin fee = \$4,000 per tournament season. Seasons can run multiple times per year.

The Discord server host's responsibilities:

- 1 Promote the tournament to their community
- 2 Manage prize distribution to winners
- 3 Handle any disputes with their community
- 4 Set and collect the prize fee amount

Your responsibilities:

- 1 Create and configure the tournament

2	Provide the URL and admin password to the server host
---	---

3	Keep the platform running
---	---------------------------

4	Resolve any disputes that escalate
---	------------------------------------

5	Collect admin fees
---	--------------------

4. Requirements

- 1 **Node.js** (free) from nodejs.org — install once
- 2 **Any modern browser** (Chrome or Edge recommended)
- 3 **The app file** — `aoe2-tournament.jsx` (in your zip)

Recommended: Host online (Section 7) so every Discord server can access their tournament URL without you needing your PC running.

5. Installation on Windows 11

Step 1 — Install Node.js

- 1 Go to <https://nodejs.org>
- 2 Click the big green LTS button
- 3 Double-click the downloaded file, click Next through every screen

Step 2 — Create your project folder

Create a folder, e.g.: **C:\Users\YourName\Documents\aoe2-agent**

Put **aoe2-tournament.jsx** inside it.

Step 3 — Open Terminal in the folder

Press Windows key, type Terminal, press Enter. Then:

```
cd C:\Users\YourName\Documents\aoe2-agent
```

Step 4 — Create the React project

```
npm create vite@latest . -- --template react
```

When asked: y → React → JavaScript. Then run:

```
npm install
```

Step 5 — Connect the app

- 1 Copy aoe2-tournament.jsx into the src folder
- 2 Open src/App.jsx in Notepad, delete everything, paste:

```
import TournamentApp from './aoe2-tournament' export default function  
App(){ return }
```

Save and close.

6. Running the App Locally

- 1 Open Terminal and navigate to your folder
- 2 Type: **npm run dev** and press Enter
- 3 Open browser and go to: **http://localhost:5173**
- 4 Leave Terminal open while using the app
- 5 To stop: press Ctrl + C in Terminal

URL structure: `http://localhost:5173/` — Landing page with all tournaments
`http://localhost:5173/#/admin` — Platform admin dashboard
`http://localhost:5173/#/t/CODE` — Specific tournament (replace CODE)

7. Hosting Online (Recommended)

Host online so every Discord server can access their tournament URL from anywhere, on any device, without you keeping your PC on.

Recommended: Railway.app (free tier available)

- 1 Create account at **<https://railway.app>**
- 2 Create a GitHub account at **<https://github.com>** and upload your project files
- 3 In Railway: New Project → Deploy from GitHub → select your repo
- 4 Add build command: **`npm run build`** and start command: **`npx serve dist`**
- 5 Railway gives you a public URL like: **`https://aoe2-agent-abc.railway.app`**
- 6 Now each tournament is accessible at:
`https://aoe2-agent-abc.railway.app/#/t/CODE`

Important: With online hosting, your master admin password protects everything. Change it immediately from the default 'Wireless'.

8. Platform Admin — Your Master Control Panel

Navigate to **/#/admin** (e.g. yourapp.com/#/admin) and enter your master password.

Admin Tab	What It Shows
■ Dashboard	Total tournaments, total players, total admin fees collected, open disputes
■ Tournaments	All tournaments with URLs, admin passwords, fee summaries, and Open/Delete buttons
■ Fees	Complete revenue breakdown — every admin fee and prize fee collected across all tournaments
■ ■ Settings	Change master password, export/restore full platform backup
■ Log	Platform-level activity log (tournament created/deleted)

9. Creating a Tournament for a Discord Server

- 1 Log into Platform Admin (/#/admin)
- 2 Click **+ New Tournament**
- 3 Fill in: Tournament Code (e.g. NA-KINGS), Tournament Name, Host/Server Name, Admin Password
- 4 Click Create Tournament
- 5 The tournament appears in the dashboard with its URL

Tournament Code rules: Letters, numbers, and hyphens only. No spaces. This becomes the URL slug.

Good codes: NA-KINGS, EU-OPEN-2025, CANADA-S1, DISCORD-AOE2

Admin password tip: Give each Discord server host their own unique admin password so they can manage their tournament without accessing others. The master password always works as a backup.

10. Giving a Discord Server Their Tournament URL

After creating the tournament, copy the URL from the dashboard and send it to the Discord server host along with their admin password.

What to send the host	Example
Tournament URL	https://yourapp.railway.app/#/t/NA-KINGS
Tournament Admin Password	The password you set when creating (or 'changeme' if left blank)
How to access admin	Click ■■ Admin in the nav, enter their password
How players register	Players go to the URL and click ■ Register
How to open registration	Admin → Season → Open Registration button

Tell every host: Change your admin password immediately after first login. Go to Admin → Passwords → Change Admin Password.

11. Tournament Admin Panel (Per Server)

Each tournament has its own Admin panel. Click **Admin** in the tournament nav and enter the tournament admin password.

Tab	Purpose
■ Season	Season name, fees, Swiss rounds, playoff size, registration controls
■ Time Windows	Define when placement matches are scheduled (day + UTC hour ranges)
■ Placement	Map, resources, speed, spectator delay, recording requirement for placement games
■ Tiers	Configure ELO division names, ranges, and icons
■ Players	View all players, classify manually, ban/unban
■ Payments	Mark admin fees and prize fees as paid per player
■ Reports	Review player misconduct reports, ban from here
■ Passwords	Change admin password, reset any player password
■ Data	Reset brackets, export backup, restore backup

12. Setting Up Time Windows

Go to **Admin** → **Time Windows**. Time windows tell the agent *when* to schedule placement matches. Matches are spread evenly across these windows.

Each window has: **Day** (Sun–Sat), **Start Hour UTC** (0–23), **End Hour UTC** (0–23), and a **Label**.

Region	Suggested Windows (UTC)
USA only	Sat 18:00–23:00 + Sun 18:00–23:00 (covers ET noon–5pm, PT 10am–3pm)
UK only	Sat 12:00–21:00 + Sun 12:00–21:00 (GMT noon–9pm)
China only	Sat 08:00–15:00 + Sun 08:00–15:00 (CST 4pm–11pm)
USA + UK	Sat 16:00–21:00 (ET noon–5pm AND GMT 4pm–9pm simultaneously)
EU only	Sat 13:00–21:00 + Sun 13:00–21:00 (CET 2pm–10pm)
No preference	Leave empty — matches spread in 2-hour gaps, no day bias

Key principle: All times are UTC. Players always see times in their own registered timezone. There is no automatic timezone guessing — you pick the windows that work for your community.

13. Setting Up Placement Match Defaults

Go to **Admin** → **Placement** to configure how placement games are played.

Setting	Options	Default
Map	Random Map or any specific map	Random Map
Starting Resources	Standard / High / Ultra High / Low	Standard
Game Speed	Normal / Fast / Fastest	Normal
Game Mode	Random Map / Death Match / Regicide / etc.	Random Map
Map Size	Tiny through Gigantic	Normal (6p)
Civilizations	Any (Random) / All civs / Draft pick	Any (Random)
Spectator Delay	10–60 minutes minimum	10 minutes
Recording Required	Yes / No	Yes
Notes	Special rules shown to players	—

Spectator delay minimum is 10 minutes and cannot be set lower. This prevents real-time information leaking from spectators to players during a match.

14. Season Configuration

In **Admin** → **Season**, configure the core tournament parameters:

- 1 **Season Name** — shown on the tournament home page (e.g. Summer 2025)
- 2 **Placement Games** — how many games to classify a player (default 5)
- 3 **Swiss Rounds** — rounds of Swiss play per division (default 7, correct for 100–200 players)
- 4 **Top N Playoff Cutoff** — how many advance to playoffs (default 8)
- 5 **Platform Admin Fee** — your cut per player (e.g. \$5)
- 6 **Prize Pool Fee** — server host's prize fund per player (e.g. \$10)
- 7 **Payment Instructions** — shown publicly on the tournament page (e.g. your e-Transfer address)

15. Opening & Closing Registration

Registration is controlled by the Admin → Season panel.

Opening registration:

- 1 Click ■ **Open Registration**
- 2 The tournament home page now shows a Register button
- 3 Players can self-register from this moment

Closing registration and generating the placement schedule:

- 1 Click ■ **Close & Generate Schedule**
- 2 The agent instantly generates all placement match pairings for every registered player
- 3 Matches are spread across your configured time windows
- 4 Each match gets a unique lobby name and password
- 5 Players log in and see their schedule in their portal — no further admin action needed

This is the single most important admin action. Everything else in the tournament runs itself. Closing registration and generating the schedule is the moment the tournament engine takes over.

16. How Auto-Scheduled Placements Work

When registration closes, the agent runs a placement scheduling algorithm:

- 1 Every registered player is paired with opponents for exactly N placement games (default 5)
- 2 Opponents are chosen to minimise ELO difference and prevent rematches
- 3 Players with fewer matches assigned are prioritised in each pairing round
- 4 Time slots are drawn from your configured time windows, spread evenly across them
- 5 If no windows are set, slots are generated in 2-hour gaps starting immediately
- 6 Each match gets: a unique lobby name, a lobby password, and all game settings
- 7 Players can see their full schedule the moment they log in

What the algorithm guarantees	What it does not guarantee
Every player gets exactly N matches	Perfect ELO balance (limited by pool size)
No rematches within the same season	Optimal timezone overlap (set your windows for this)
Matches spread across your time windows	All players get matches in their preferred hours
Unique lobby name + password per match	

17. Players Register Themselves

Players go to the tournament URL and click ■ **Register**. They fill in:

- 1 Player name (in-game name)
- 2 Discord tag
- 3 Email address (used for login)
- 4 Password (min 6 characters)
- 5 Favourite civilization
- 6 Known ELO (800 if unsure)
- 7 Timezone

After registering, they see a success screen telling them to log in and check their portal for their placement match schedule. The organiser does **not** need to do anything at this step.

Admin's role during registration: Zero. Players register themselves. The only admin step is marking fees as paid once you receive payment.

18. Player Login & Portal

Players click ■ **Login** and sign in with their email and password. Once in, they see ■ **My Portal** with four tabs:

Tab	What Players See & Do
■ Dashboard	ELO, rank, W/L, Swiss record, pending matches with lobby info, settings vote, placement progress
■■ Matches	All upcoming and completed matches. Report results with I Won / I Lost buttons.
■ Standings	Their division Swiss standings, highlighted row, Top 8 zone indicator
■ Profile	All account details, fee payment status, logout

Players never need to contact the organiser to: See their matches, find lobby names/passwords, report results, vote on settings, check standings, or see scheduled times in their timezone.

19. Players Report Placement Results

After playing a placement match, both players report the result from their portal dashboard.

Scenario	Outcome
Both report same winner	Auto-confirmed. ELO updated. Progress bar advances. No admin needed.
Players report different winners	Dispute flagged. Admin sees it in the Bracket tab dispute panel. Admin reviews recordings and resolves.
Only one reports	Shows 'Waiting for opponent to confirm'. Match stays pending.

20. Opening Division Brackets

Once enough players are classified, go to **Admin** → **Season** and click **Open Division Brackets**. This opens all divisions simultaneously.

- 1 The agent checks how many classified players are in each division
- 2 Any division with 2+ classified players gets a bracket opened
- 3 All divisions open at the same time — no need to do each one separately
- 4 Each bracket starts in Settings Vote phase

Minimum requirement: 2 classified players per division to open. 4+ is recommended for meaningful Swiss rounds.

21. Settings Vote

After brackets open, players in each division vote on their settings. They see the vote panel in their portal dashboard.

- 1 Players vote on: Map, Starting Resources, Game Speed
- 2 Votes are tallied live — the leading option is shown to all voters
- 3 When you're satisfied with the vote count, go to the Divisions tab
- 4 Click **■ Lock Settings** to lock in the winning options for that division
- 5 Then click **■■ Start Swiss R1** to generate Round 1 pairings
- 6 Or use **■■ Start All Swiss** in the Season panel to start all locked divisions at once

22. Starting Swiss Rounds

Each round of Swiss play works as follows:

Step	Who Does It	What Happens
Matches play	Players	Players find their lobby info in their portal and play
Results reported	Players	Both players report; auto-confirmed if they agree
Round complete	Auto-detected	Next Round → button lights up gold when all matches done
Advance round	Admin (one click)	Click Next Round → in the Bracket tab for that division
After Round 7	Admin (one click)	Click Cut to Top 8 → to generate the playoff bracket

Admin involvement during Swiss: One click per round per division to advance. Everything else is player-driven.

23. Player Self-Reporting Tournament Matches

Tournament matches work identically to placement matches — both players report independently, agreement auto-confirms.

- 1 Player logs in → sees pending match in My Portal → Dashboard
- 2 Clicks **■ I Won** or **✕ I Lost**
- 3 If opponent agrees → result confirmed → ELO updated → standings refresh
- 4 If opponent disagrees → dispute flagged → admin resolves

Every match card in the portal shows the **lobby name, password, and game settings** so players always know exactly where to play and how to set up the game.

24. Dispute Resolution

- 1 A red  banner appears in the tournament header showing the number of disputes
- 2 Admin goes to  Bracket tab — disputes are listed at the top
- 3 Admin reviews game recordings (both players required to record)
- 4 Admin clicks **Resolve** next to the disputed match
- 5 A popup shows what each player reported. Admin selects the correct winner.
- 6 Result is confirmed and marked as admin-resolved.

Why recordings matter: All matches require recordings by default. Without a recording, a player who disputes a result has no evidence. Make this policy clear in your tournament announcement.

25. Map Veto

For tournament matches (Swiss and Top 8), the admin can run a map ban/pick process.

- 1** In the Bracket tab, find the match card — click **■■ Veto**
- 2** A pool of 12 maps appears. Player 1 bans first, then Player 2, alternating until 4 maps are banned
- 3** Player 1 then picks the final map from remaining options
- 4** The chosen map is locked to the match card and shown in the lobby box

Placement matches always use the configured placement map setting (default: Random Map).

26. Top 8 Playoff

After Swiss completes, the top 8 players (by record, Buchholz tiebreaker) advance to seeded single-elimination playoffs.

Seed	Opponent
1st	8th
2nd	7th
3rd	6th
4th	5th

Players self-report playoff results identically to Swiss. A  Champion banner appears when the Grand Final is confirmed.

27. Discord Export

Go to ■ **Discord** tab for copy-paste formatted text for your Discord server.

- 1 **Tournament Announcement** — full @everyone post with URL, divisions, fees, and how to register
- 2 **Division Bracket Exports** — standings or Top 8 bracket per division
- 3 Click ■ **Copy**, go to Discord, Ctrl+V to paste, press Enter

28. Fee Collection & Revenue

Go to **Admin** → **Payments** to track fees per player.

- 1 When a player sends their admin fee: click **Admin Fee \$X** button next to their name
- 2 When a player sends their prize fee: click **Prize Fee \$X** button
- 3 Both buttons turn grey and show a ✓ checkmark when marked as paid
- 4 The payment summary at the top shows total collected for each fee type

The **Platform Admin dashboard** (/#/admin → ■ Fees) shows total admin fees collected across ALL tournaments — your complete revenue picture.

Recommended payment method: Interac e-Transfer for Canadian players, PayPal for international. Set Interac Autodeposit so payments arrive without manual approval. Ask players to include their Discord name in the transfer message.

29. Banning & Reporting Players

Player Reports:

- 1 Any logged-in player can click ■ Report on a match card
- 2 They enter a reason (no-show, cheating, harassment, etc.)
- 3 Admin sees reports in Admin → Reports
- 4 Admin can ban directly from the report or mark it resolved

Banning:

- 1 Admin → Players → click Ban next to the player
- 2 Their account is immediately suspended
- 3 Their email is blocked from re-registering
- 4 They are excluded from standings and future brackets
- 5 Click Unban to restore access

30. Password Management

There are three levels of passwords:

Password	Who Has It	Where to Change
Master (Super Admin)	You only	/#/admin → Settings → Change Master Password
Tournament Admin	You + Discord server host	/#/admin → Tournaments → Change Password (or Admin → Passwords inside the tournament)
Player	Each player	Admin → Passwords → Reset Password next to their name

Default master password: Wireless. Change this immediately after first setup.

31. Backup & Restore

The master backup covers ALL tournaments at once.

Platform-level (all tournaments):

- 1 `##admin` → Settings → ■ Export Master Backup
- 2 Downloads a single JSON file with all tournament data
- 3 To restore: ■ Restore Backup → select file → all data restored instantly

Per-tournament backup:

- 1 Inside any tournament: Admin → Data → ■ Export Backup
- 2 Downloads just that tournament's data
- 3 Restore: Admin → Data → ■ Restore Backup

Backup schedule recommendation: Export the master backup before and after each weekend of play. Store in Google Drive or email it to yourself.

32. Selling to Discord Servers

Each Discord server that wants to run a tournament gets their own instance — separate URL, separate admin, separate data — all from your one hosted app.

Step	Action	Time
Customer pays setup fee	They send you payment	—
Create tournament	/#/admin → + New Tournament → fill in code, name, password	~2 min
Send URL + password	Share the tournament URL and their admin password	~1 min
Host configures	They set season name, fees, tiers, time windows	~10 min
Tournament runs	Players self-register, play, report — host only monitors	Ongoing

Suggested pricing for setup + hosting:

Package	Price (CAD)	Includes
Single Season	\$50–100	Setup + one tournament season on your hosted instance
3-Month Plan	\$150–250	Setup + hosting for 3 months + basic support
Annual	\$400–600	Year-round hosting + multiple seasons + priority support

Plus you collect admin fees from every player in every tournament. 5 servers × 80 players × \$5 = \$2,000 per season, on top of setup fees.

33. Troubleshooting

Problem	Solution
npm run dev fails	Run npm install first. Delete node_modules and try again.
Tournament URL shows 'Not Found'	Check the tournament code in /#/admin. The URL must exactly match the code (case-sensitive).
Data gone after refresh	You cleared browser storage. Restore from backup. Always use the same browser.
Next Round button greyed out	All matches in the current round must be reported before advancing.
Player can't log in	Check their email exactly. Reset their password in Admin → Passwords.
Can't open brackets	Need classified players in that division. Check placement match progress.
Master password forgotten	Open DevTools (F12) → Application → Local Storage → delete key 'aoe2_v5_superpw' → default 'Wireless' is restored.
Tournament admin password forgotten	Log into master admin, go to Tournaments tab, click Change Password.

34. Glossary

Term	Meaning
Tournament Code	Short alphanumeric ID used in the URL (e.g. NA-KINGS). Set when creating the tournament.
Master Password	The super-admin password for the platform admin at /#/admin. Protects all tournaments.
Tournament Admin Password	Per-tournament password given to the Discord server host.
Admin Fee	Your cut of the player entry fee. Collected per player, tracked in platform admin.
Prize Fee	The server host's portion of the entry fee, used for prize distribution.
Time Windows	UTC day+hour ranges when placement matches are scheduled. Set per tournament.
ELO	Skill rating number. Higher = better. Updates after every game.
Placement Games	First N games a player plays to determine their division. Always free.
Swiss System	Tournament format where everyone plays every round, paired by record. No elimination.
Buchholz	Tiebreaker: sum of your opponents' wins. Higher = stronger schedule.
Lobby Name	Auto-generated unique identifier for a game room. e.g. NA-KINGS-R01-THEVvCLAN
Spectator Delay	Minutes before spectators see the game. Prevents info leaking. Min 10.

Dispute	When two players report different results. Admin resolves by reviewing recordings.
---------	--
